

Timothe Ermolaev

Product Designer · AI · B2B · FinTech

Product Designer with 3+ years of experience across AI, B2B, and FinTech products. I lead end-to-end design from business problem, UX architecture, and user flows to interactive prototypes, UI, design systems, handoff, design review, and post-release iteration. I design enterprise UX, roles and permissions, multi-account journeys, wallets and payouts, LLM features, errors, and edge cases. I work cross-functionally with product, analytics, and engineering, using Figma, AI tools, and code prototypes to validate logic before frontend development.

WMT AI

Product Designer · AI · B2B SaaS

2025 - Present

Product Designer AI B2B SaaS

Leading product design for two B2B SaaS / AI products. NeuroKey provides enterprise access to LLMs without sharing personal data; Relevanter is an AI recruitment service.

Key results:

- Own the end-to-end design cycle: UX architecture, user flows, prototypes, UI, handoff, design review, and post-release iteration
- Design enterprise UX across roles and permissions, LLM journeys, system states, errors, and edge cases
- Turn early journeys into AI and code prototypes, evolve the design system, and support delivery with product, analytics, and engineering

UXART

UX/UI designer

2023 - 2025 · 2 years

UX/UI designer

Ran 3-4 project streams in parallel across AI, FinTech, and B2B. Covered the full cycle: UX audit, requirements analysis, architecture, user flows, prototypes, UI, design systems, specifications, and handoff.

Key results:

- Ran 3-4 project streams in parallel
- Replaced static presale mockups with clickable AI prototypes shareable by link
- After the retro and team training, the next presale was won; AI prototypes became a studio standard

ComboGPT

Product Designer · AI

Product Designer AI

End-to-end design of an AI aggregator from scratch. ChatGPT, Claude, Gemini and Grok in one subscription with no VPN: one-click model switching and onboarding built for a non-technical audience.

- End-to-end design of an AI aggregator from scratch: concept to public release in about 3 months
- Designed onboarding for a non-technical audience and one-click model switching
- Took the core journeys from concept and prototype through handoff and public release

OVork

Product designer · mobile fintech

Product designer mobile fintech

A studio-side project for a live fintech product. Updated the wallet section around tax-authority requirements, payouts, and notifications, with releases every 5-10 days.

- Updated the wallet section for tax-authority requirements while preserving the 5-10 day release cadence
- Rebuilt notifications as one component with three modes; the component entered the design system
- Internal before/after around the release series: money-related contacts fell from 41% to 19%, successful first withdrawal rose from 71% to 89% (not an A/B test)

Zinda

Product designer · fintech

Product designer fintech

Took the mobile direction of a B2B bank to handoff in 4 months. Designed about 40 screens and states, a multi-account architecture, prototypes, and specifications; moved lending products to post-MVP. The product shipped.

- Moved from a UX audit of web journeys to mobile architecture, prototypes, specifications, and handoff in 4 months
- Designed about 40 screens and states, defined a multi-account architecture, and moved lending products to post-MVP
- Production delivery was completed by the team; the product shipped
